Corporate Advertising

The JumboMedia™ is one of the most effective outdoor advertising programmable displays. It features industry standard 16 x 16 pixel intelligent modules that are easy to assemble. The user friendly software allows you to connect the modules horizontally or vertically, up to 640 pixels long and 480 pixels high. With Pro-Lite's advanced video driver, the JumboMedia™ can display video from television, video recorder or digitized video, with 256 grades of color and up to 30 frames per second. At an average of 19 times less power consumption, the JumboMedia™ will pay for itself many times with the electricity cost that you would have to pay if the sign is made with incandescent bulbs. Because the normal life expectancy of LEDs is 10 years, the JumboMedia™ is virtually maintenance free.

Jumbo-Media™ module

Module size: 19.5"x19.5"x8"
Matrix: 16x16 (clusters)
Cluster Size: 1"
Cluster Center-Center: 1.23"
MCD: 4200
Red LED's/cluster: 6
Green LED's/cluster: 8
Cabinet: Black Metal
Weight: 36lbs
